

## **Kantech EntraPass End User Training V4**

### **Cards Management V4**

This module covers primary tasks you will have to do as a system operator when managing your cardholder's population. These tasks will be accomplished via the Users tab from any Workstation.

### **Schedules and Holidays V4**

This module covers schedules. Schedules are used throughout the system. The same schedule can be used to control access of a card holder, unlock a door, allow activation of relay or other system components and allows operators to log onto the system. Combined with holidays, schedules provide a flexible configuration.

### **Access Level and Card Access Group V4**

This module covers how to define access to specify where and when a card holder can go.

### **EntraPass WebStation V4**

This module covers how the EntraPass WebStation allows you to perform some operations normally done through a workstation via a web browser.

### **Reports V4**

This module covers how reports can be used on user and system activities. Reports can be viewed, printed, emailed or simply stored for later use.

### **Using Desktops V4**

This module covers desktops. Desktops provide the operator live and historical information on the system. Different information can be displayed on different desktop screens.

### **Operations V4**

This module covers the operations of the system and how manual operations will bypass any other rules on the system under certain circumstances.

### **Video Integration V4**

In this module, you will see how to design video view, retrieve recorded video and other options.

### **EntraPass Operators V4**

This module covers the rights and privileges of EntraPass operators.

### **Kantech EEUT\_SkillCheck**

Skill Check test

## **Kantech Advantage Program (KAP) V5**

### **Card Management with EntraPass Special Edition V5**

Learn how to manage cards with EntraPass Special Edition. This module is part of the Kantech Advantage Program (KAP) v5 series.

### **Card Management with EntraPass Corporate Edition V5**
